

Stories & Acceptance Criteria

We've received a prototype for a toaster. It's features include:

- The ability to toast 4 slices of bread (2x2).
- Toasting time from 1 – 6 minutes.
- A 'cancel' option.

One identified User Story is "As a user, I want to be able to cancel the toasting process so that I can change slices of bread"

Your task is:

- Identify what would be in scope for testing?
- Given the defined User Story, what would be the test scenarios? Please provide at least 3 or 4.
